

RANDOM.ORG

<http://www.random.org>

25 June 2009

We have independently evaluated the output of the random number generator used by RANDOM.ORG to verify it operated in such a way that it consistently produced random numbers. This evaluation should hold true in every instance and each number within the particular scaling interval tested should have an equal chance of being selected.

We examined numerous sample sets of data generated by the random number generator embedded within the RANDOM.ORG website, and performed recognised statistical tests on the data files generated by the random number generator.

Based on our review of the sample data, we confirm that the random number generator embedded within the RANDOM.ORG website consistently selected numbers on a random basis.

For further information about our review process, click here www.ecogra.org/fairness.
