20 November 2009

Dear Sir/Madam,

This letter is to confirm that RANDOM.ORG is pleased to act as an Independent Observer, overseeing and carrying out the random selection of winners for competitions provided by Company.

Founded in 1998 by Dr. Mads Haahr, Lecturer in the School of Computer Science and Statistics at Trinity College Dublin, RANDOM.ORG is the Internet's premier source of true random numbers. As opposed to the pseudo-random number generators commonly used in computer programs, RANDOM.ORG uses atmospheric noise to generate random numbers in a completely nondeterministic fashion. This means that numbers from RANDOM.ORG are unpredictable even to someone who knows the algorithm used.

Through its more than eleven years of operation, RANDOM.ORG has accumulated an extensive list of clients, including researchers who use the numbers for sampling and modeling, operators of games and gambling sites who use the numbers for rolling dice and shuffling decks, and – of particular relevance for Company – a great range of businesses and lottery operators who use the service for draws and competitions.

RANDOM.ORG's numbers have been the subject of extensive statistical evaluation and have passed the most rigorous tests for randomness, including the current industry standard, which is the test suite recommended by the US National Institute for Standards and Technologies (NIST). The quality of the numbers has also been independently evaluated by e-Commerce Online Gambling Regulation and Assurance (eCOGRA). Furthermore, the quality of RANDOM.ORG's numbers is monitored in real time to assure the continuous correct operation of the generator.

RANDOM.ORG uses its proven and tested technology to select the required amount of winners from Company's competition entries. Every entry received by us from Company has an equal opportunity of being selected as a winner. Company has no influence over the results of the selection process carried out by RANDOM.ORG. A record of each draw is kept on the RANDOM.ORG site for future reference. Hence, the draws are conducted in a manner that is fair, unbiased and in accordance with the highest technical and ethical standards.

It should be noted, that while RANDOM.ORG was created and is owned and operated by a Lecturer in Trinity College Dublin, the College has no ownership of the technology or the service and shall have no liability for its operation.

If you have any further questions, or if you would like to learn more about RANDOM.ORG, please do not hesitate to contact us.

Yours sincerely,

Dr. Mads Haahr
